

Australia's Answer to your Water Saving Needs.

The **Auswide** Urinal System deals comprehensively with all common urinal problems, reduces operating and maintenance costs, improves hygiene and enhances urinal appearance.

Smell - removing uric salt and bio film build-up on the internal surface of the waste outlet and waste trap and reducing or eliminating seepage from the connection between the waste outlet and the waste trap.

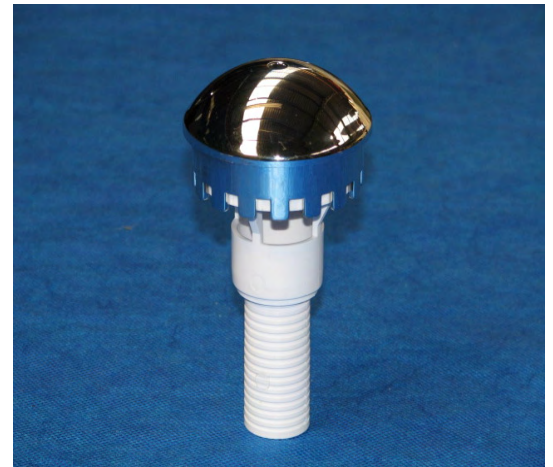

Blockages - removing the build up of uric salts and lime scale and by obviating the need for traditional urinal blocks that can otherwise be trapped in the waste trap and pipes.

High Water Usage - reduces water usage by up to 96%.

Maintenance Costs - using straightforward biotechnology.

The system substantially reduces routine maintenance costs.

Appearance - three monthly cartridge replacement keeps the urinal looking fresh and working efficiently; alternative systems lead to a build-up of lime scale and uric salts on the urinal wall and usually require unsightly urinal mats or blocks to help deal with odours

[Chrome Cartridge](#)

Environmental Impact - the systems inner cartridge, which is replaced every three months, has been designed to be recyclable and the internal active components are fully biodegradable.

Hygiene – The proprietary bio-enzymes remove harmful bacteria from the urinal waste outlet, stopping any odours from emanating back up from the pipework.

Australia's Answer to your Water Saving Needs.

Environmental Benefits

The cartridge used in the **Auswide** Urinal System is an environmental product, which not only saves vast amounts of water (96%), but also eliminates the use of chemicals and bleaches that are normally used to clean urinals one of our most valuable resources for future generations, you will no longer need to pour harmful chemicals down the drain or use unsightly chemical blocks that are non-biodegradable which damage fish and our aquatic ecosystems.

The problems of smells and blockages are commonplace wherever you find urinals. A cause of embarrassment for both staff and visitors alike, without attention they reflect badly on your organization's image.

The system is a tried and tested product that cures urinal problems at source. The product helps the environment as it negates the need for harmful chemicals and urinal blocks.

'Good' bacteria and enzymes in the system deal with the causes of smells and blockages. They feed on the uric salts, which become soluble and are washed away with the next flush.

The benefits

- Reduces costs
- Improves hygiene
- Significantly improves the working environment for clients and staff
- Quick and easy to install
- Reduces blockages - keeps urinal traps and pipework clear
- No harmful chemicals - effective microbiological cleaning formula
- Saves water – **Up to 96 % potable water savings**
- Eliminates smells
- Easier cleaning and maintenance
- Controlled timing 24 hours seven days a week
- Distributors in all Australian states
